

Tristar is recipient of 'Technology Implementation of the Year' award

Tristar is proud to announce winning the 'Technology Implementation of the Year' award, at the Logistics Middle East Awards organized by ITP Publishing. There were 21 entries for this award and Tristar was shortlisted alongside four other finalists before being declared winner.

Tristar was recognized for being one of the first logistics companies in the world to have a fully live Blockchain platform, which provides customers with full real-time oversight on end-to-end warehousing and transportation processes.

The award continues to solidify Tristar's position as a regional leader in the use of technology in logistics. The company's Digital Transformation strategy, initiated at the beginning of 2017, continues to bear fruit and bring value to Tristar's stakeholders.

When accepting the award on behalf of Tristar, Adam Lalani, Group Head of IT said: "Winning this award is a victory for imagination, daring to dream, and for teamwork. This was a massive team effort, so many people were involved and I am very happy to accept the award on behalf of Tristar."
